DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2,4-8 and 10-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Tolles.

Tolles teaches an apparatus for cleaning a polishing pad of a CMP polishing system which includes a first drive device coupled with the polishing pad, 100, and a second drive device for bringing the wafer, 20, into contact with the polishing pad, a dispenser, 40, located above the polishing pad, and adapted for dispensing a slurry, 32, to the polishing pad, an extension, which includes piping, and a plurality of nozzles, 44, 46, for delivering a wash solution, which is de-ionized water, to the polishing pad, the piping coupled to and extending from the dispenser toward a center axis of the pad, and along an area from the circumference of the pad to the center axis, the piping cooperable to direct a water spray to the pad at a ninety degree angle, (col. 8, lines 23-44, fig. 6).

Allowable Subject Matter

Claims 3 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 10/31/05 have been fully considered but they are not persuasive.

The Applicant argues that the dispenser of Tolles does not direct solution to an area proximate and including the center axis. The Examiner disagrees. The Tolles reference teaches that the dispenser directs either a slurry or a cleaning solution over the surface of the polishing pad, (col. 8, lines 23-44). That teaching along with fig.1 of Tolles, which shows the dispenser, 40, projecting from an edge to the center of the polishing pad, teaches that the solution would indeed be directed to an area proximate to and including the center axis.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
